

Online seminar - join us wherever you are!

Climate Change and Global Child Health

Fri, 19th March 2021 18-19.30 h CET

Program

Dr. Reinhard Koppenleitner, GTP member and vice chairman of the German Alliance for Climate Change and Health, (KLUG e.V.) will set the scene with an introductory talk.

Thereafter we invite you to join our discussion round.

Together we would like to elaborate how to better account for climate change within the GTP and how to incorporate the topic further into our activities.

Please join us for this interesting seminar and for further developments within the GTP.

Climate Change and Global Child Health

The GTP aims at „improving child health world-wide“, especially in countries with limited resources. In order to achieve this goal a thorough analysis and impression of the multiple factors endangering child health world-wide is needed. Health is not only influenced by the lack of preventive and curing medical services on national level but also by various global factors.

One central global component is climate change (Castello, Lancet 2009), which even manifests itself as climate crisis or climate catastrophe in some parts of the world.

The GTP can play an important role in advocating for affected populations and can use its international network to spread information about the effects of climate change on child health.
